Senior Wellness Health Screen

Patient Name

What preventative tests will be performed for my pet, and what do they detect?

- Biochemical Profile: kidney function, liver function, diabetes, abnormalities that result from long-term medications, pancreatitis and certain cancers.
- Complete Blood Count: anemia, infection, hydration status, inflammation and bleeding
- Thyroid hormone: as your pet ages it is common for thyroid function to become abnormal and cause signs of illness
- Urinalysis: kidney function, infection and crystal detection
- Heartworm check: for cats and dogs

Acceptance:

Please complete the recommended testing for my pet. I understand that I will be called with the results of these tests once they are received.

Decline: I decline the recommended preventative care screening at this time. I understand that this screening is offered at the time of my pet's annual exam at a reduced rate and understand the benefit of screening my pet for medical conditions that could be revealed through this blood test that would not necessarily present itself in a physical exam only.
